

# The Wisconsin Early Mustangers

"A FEW TO PRESERVE THE BEST"

THE FEEDBAG Jan. 5, 1986

From the Pres.

At the start of the new year we have noticed that the membership roles have crested the two hundred mark. More amazing than that is the fact that over one hundred are on the active roles. We welcome those who have recently joined us and appreciate the continued support of our existing members. Although slightly embarrassing, I hope that we keep making new friends faster than I can remember their names.

Never willing to miss a trick or leave well enough alone, the State of Wisconsin D.O.T. is trying to pass legislation which would double the cost of collectors plates. They must feel that we are a real threat to the financial strength of the state with our one time license fees. Naturally those who have their collectors plates would not be charged any additional fees. When we have more information on this subject we'll pass it on to you.

I am very excited about the work we have planned for the old black convert' this year. Going to try and spruce up the front tub section including the engine compartment. Would also like to work on the doors some more. Hopefully it will be getting a fresh coat of that Raven Black and eliminate some of those inevitable road chips. It's much easier for me to pull the engine out to detail it than to work around it in the car. You all know that I am more in to the "go" than show but it must look respectable too. In that vein we are working on a new ignition system. Hopefully it will be done in time for the driving season. Still dreaming of finding a small block 3-2 barrel carb set -up some day. ( at the right price of course )

Still working in the Chicago area and still seven days a week. Did manage to talk with Jerry Manning today about the Annual Club Dinner on Feb. 22nd. Sounds like things are falling in to place very well. He promised to have a sign up form ready for me if I make it home next week end. You should find it elsewhere in this newsletter. Fill it out and send it in, or bring it with you to the Jan.28th meeting. Sounds like a good time.

Hope to see you all soon. "keep on 'stangin'".

Dick Doria

\* NOTICE! NOTICE! \*  
\*\*\*\*\*

THE WISCONSIN CHAPTER MAFCA SWAP MEET SPACES (State Fair Park Swap Meet) ARE ALL SOLD OUT!!

You may wish to call and put your name on a waiting list, but the spaces are now sold out. Please DO NOT remit to the Swap Meet Chairman. If you are put on the waiting list, you will also be put on the Wisconsin Chapter Swap Meet Vendor Mailing List, and you will receive advance notice of ALL Wisc. Chapt. MAFCA Swap Events.

The GOOD News is, that if all of the spaces are sold, that it should be a SUPER Swap Meet! SEE YOU THERE!

## ELECTRICAL TRAINING FOR THE MUSTANGER

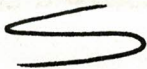

If you are like most other automotive hobbists, you are somewhat frightened by the magical phenomena known as electricity. We will attempt to belay some of those fears for you in the next few months. This stuff will be pretty simple, but still will give a good foundation for doing some of your own electrical troubleshoot-ing. You will be amazed at the amount of electrical work which can be done with a few good jumper (test) leads and a twelve volt test light. Common sense goes a long way too.

Useable electrical energy is found in two states, alternating current ( such as your household wall plug ) and direct current , such as your car or flashlight battery. We will be concentrating on the direct variety, which by the way is easier in most part to work with. No matter what type you are working with, always remember that to do a job, electricity must have a completed path called a circuit.

Think of your cars battery as a little powerhouse. For the purpose of discussion, it sends power from the POSITIVE ( + ) Terminal. The power then follows part of the circuit ( wires ) to the job location ( light, horn, radio etc. ). If the circuit is complete it then follows what we call the ground path back to the NEGATIVE (-) Terminal. If any part of the circuit is not complete the desired device will not operate. This of course includes wires, fuses, all connections, the device itself and of course the battery.

Next month we'll set up some common examples of failures or malfunctions and tell you the systematic approach to troubleshooting. Until then, think " complete circuit paths ".
